

Results of the AV-TEST Private Windows Test

Acronis Cyber Protect

March 2020

Introduction

Acronis commissioned AV-TEST to perform a private test of their Cyber Protect product against the test categories prevalence detection and static false positives which are part of the AV-TEST certification tests.

The version used in the test was the Cyber Protect product with the version number: 19.0.3208. The test was carried out on Windows 10 Professional (English), (64-Bit) in March 2020.

Test Results

In the prevalent malware part AV-TEST tested the static as well dynamic detection rate of Acronis Cyber Protect. A set of 6932 malicious PE files was used to carry out this test. At first the files were scanned with the on-demand scanner. Afterwards all files not detected during the scan were executed on a Windows machine to determine the dynamic detection rate. The product scored perfectly with a 100% detection rate.

The false positive test was conducted with an on-demand scan and contained about 180.000 files from benign 3rd party Windows applications. Acronis caused 0 false positives, which is a perfect result.
